

AIS is the latest technology developed to provide more accurate and more timely navigation information between ships thus reducing the potential for collision and decreasing the response time to high-priority and safety calls. Equally important is also the effectiveness with which **Vessel Traffic Systems**, used by **Ports, Harbors, Pilots, Security and Shipping Agents** can now manage traffic monitoring, administrative and logistical activities through this wealth of real time ship data. Ocean Technologies offers custom packages to **shore-based** ship and traffic management organizations. The advantage of this equipment is the ability to mount these systems just about anywhere, shore-side, and have **access** to the information from **anywhere in the world** including on the road, at home and at multiple office locations. With AIS installed at your port you can provide better scheduling, asset management and answer the question that Agents, Operators and Customers want to know:

Where is the Ship?

AIS on your Desktop
\$99.00/Month
30 Day Trial.

Activation Fee \$149.95

AIS DISPLAY:

- World Coverage
- Interface Multiple Data
- Tagging Capability
- Instant Range and Bearing
- Click for Instant Information
- User Defined Alarms
- Database Collection
- Historical Playback
- Radar Integration
- Marine Asset Tracking
- NOAA Charts
- Camera Integration
- Radio over IP
- Web Access

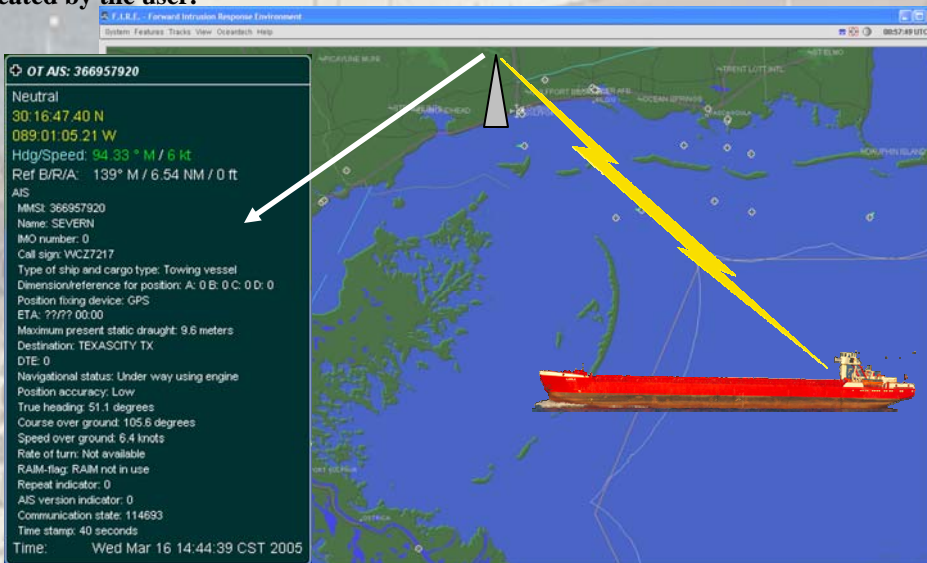

Ocean Technologies offers scalable AIS packages from single-user displays to complete multi-receiver, multi-user systems. Every system starts with a single low-cost display and can be upgraded to include hundreds of users, web-based displays as well as other types of Target Data displays such as our High Definition Surveillance Radar and Friendly Force/Asset Tracking systems.

For those that already have an AIS receiver but want specific alarms, detailed control, or a particular chart display, we can display your AIS data on your PC allowing unparalleled situational awareness, user alarms based on ships ID and geographic location, and notification of arrival via email or text message. This information can be overlaid on Free NOAA charts, ESRI GIS data or any number of reference points created by the user.

VESSEL IDENTITY

Select a target to display information:

- ↗ MMSI Number
- ↗ IMO Number
- ↗ Radio Call Sign
- ↗ Name of Vessel
- ↗ Type of Ship/Cargo
- ↗ Dimensions of Ship
- ↗ Navigation Status
- ↗ Rate of Turn
- ↗ Speed over Ground
- ↗ Position Accuracy
- ↗ Course over Ground
- ↗ True Heading
- ↗ Time Stamp
- ↗ Destination
- ↗ ETA

Ocean Technologies can customize a package to specifically meet the needs of a wide variety of users of this data. These packages can include full installation, operation and maintenance as required by the customer, or simple instructions for do-it-yourself installation and operation.
